

The Attain / Red Hat Partnership

Accelerating Digital Transformation

Attain and Red Hat have partnered to be a catalyst in the federal community to transform technology the open source way. We help agencies discover how development can be done using Agile, DevSecOps, and Cloud approaches to achieve in minutes what used to take days, weeks or longer.

From application development to middleware to infrastructure, we help agencies accelerate modernization efforts to deliver results faster with less cost and risk, efficiently and securely manage portfolios of applications, and simplify deployment and management of infrastructure.

The Tools of Transformation

To fast track agencies' modernization efforts while mitigating risk, strengthening security, reducing costs, and increasing efficiencies, we employ:

- Agile and DevSecOps to accelerate results and break down barriers between teams
- Attain Test Driven Management™ incorporating automation to drive continuous deployment and monitoring
- UX approaches leveraging Usability Labs to minimize rework and improve the end user experience
- JBoss® EAP Middleware to drive efficiency and speed
- Ansible to drive automation and acceleration
- OpenShift containers and microservices for improved efficiency, portability and cost savings
- OpenSCAP for automated scanning and compliance analysis

Cultivating a Culture of Collaboration

We believe the best path to modernization is a collaborative one fueled by not just open source technologies, but by open source-aligned cultures as well. Accordingly, Attain and Red Hat are committed to helping agencies understand the cultural transformation that's needed, including the buy-in, transparency, and commitment to tackling business challenges.

Our unique, holistic approach to digital transformation infuses process improvements and organizational evolution. As such, in addition to Agile, DevSecOps, Cloud, and open source tools, we help agencies build open source-aligned organizations with an innovative, transparent, collaborative and engaged workforce. Agencies can then build teams that act with agility, accountability and purpose to drive momentum along the journey to successful transformation.

Case Study

Accelerating Modernization

We are helping a government financial regulatory agency accelerate their modernization efforts leveraging an Attain cloud migration strategy to containerize enterprise applications using Open Shift to "lift and shift" applications to the Amazon Web Services (AWS) Cloud. This project is positioning the agency to realize the many benefits of containerization including: higher application density, faster processing, and automated patching; and delivering cost savings on licensing, hardware, and staffing for operations and maintenance.

Community-Powered Innovation Center

Our Community Powered Innovation Labs allow business people and technologists to collaborate in an immersive experience and learn how to deliver results with speed, agility, and efficiency. Three tracks help agencies answer vital questions around open principles, software development methodologies, and trends in innovation.

Open Organization Academy Track

How can I build an open organization with innovative, transparent, adaptable, collaborative, and engaged people?

This track explores how open principles—like transparency, inclusivity, adaptability, collaboration, and community—can fundamentally alter contemporary organizational culture and design. The session will focus on the foundations of an open source approach to building and cultivating organizational culture and explore concrete, actionable ways to begin building teams that act with agility, accountability, and purpose.

Builders Academy Track

How do I translate open principles into methods, strategies, and tactics to solve problems?

Executives and their teams will work together to practice software development methodologies used in the DevSecOps revolution. There is no coding involved. Builders Academy teaches how to build products using lean, agile, and continuous delivery practices, simulating many of the tools and techniques used in the Red Hat Open Innovation Labs.

Open Source Tech Academy Track

What open source technologies are shaping the future, and which are mature enough for serious consideration in my enterprise?

This track will discuss the technologies that are shaping innovation today. In addition, insights and case studies will be shared to demonstrate how organizations are using emerging technologies to accelerate change.

About Attain, LLC

Based in McLean, Va., Attain is a management, technology, and strategy consulting firm comprised of innovative problem solvers who disrupt the status quo to change the world and improve the lives of those we touch. From strategy and digital transformation—including user-centric design, agile development, DevSecOps, and continuous deployment—to cyber security, cloud services, business intelligence and analytics, infrastructure management, as well as industry-specific operational expertise, Attain brings proven performance and forward thinking to advance our clients' missions across the government, education, healthcare, and nonprofit landscapes.

About Red Hat

The US government demands performance, transparency, and value—exactly what Red Hat and open source offer. Red Hat is the standard choice for Linux in governments worldwide. Our cloud, virtualization, storage, platform and service-oriented solutions bring real freedom and collaboration to federal, state, local, and academic programs. And Red Hat's worldwide support, training and consulting services bring the power of open source to your agency. We are a part of a larger community working together to drive innovation.
